Idea

- App Name: Hiire
- Concept: Freelancing
- Description: There are 2 personas.
 1. Creator: The person who creates a job. Accepts the applicant by making a payment.
 2. Applicants: They will see the available works. He/She can swipe right(Interested) or left(Not interested).

Both personas can have a discussion inside the app using the chat feature.

Features

- Users can signup/signin for the application
- User can post the requirements with the details of the work.
- User can also see the posts create by others and can
 - Swipe right – if interested
 - Swipe left - if not interested
- The Creator of the post can see the list of people who are interested and can accept the work request.
- The creator can rate the work which was submitted and make payment.
- The chat feature which enables the Creator and the Freelancer to have discussion.

Tech Stack

Frontend

- Flutter is an open source framework by Google is used to develop cross platform applications for android , ios and web from single codebase.

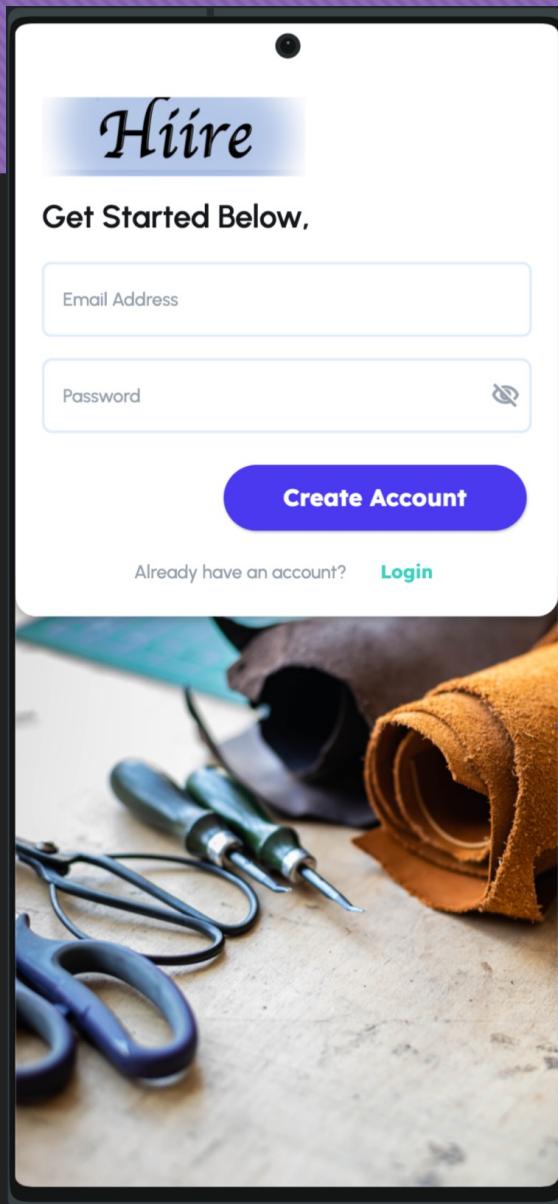

Backend

- Firebase is a set of hosting services for any type of application. It offers NoSQL and real-time hosting of databases, content, social authentication, and notifications.

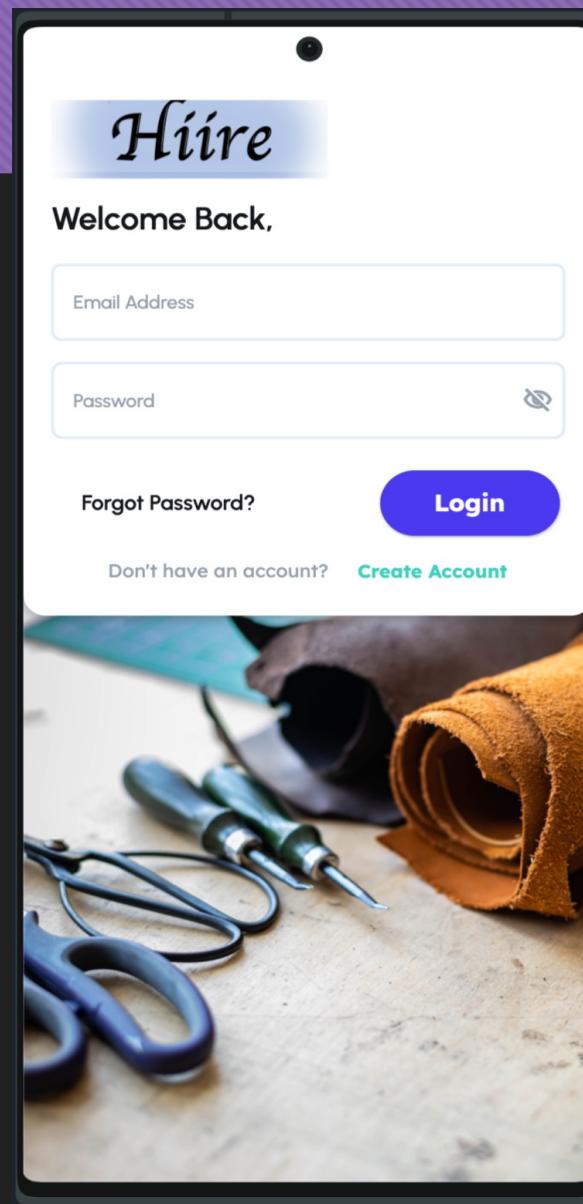

Platforms

- Android,web,ios
